

MS25560 BALL JOINT ENGINEERED SOLUTIONS

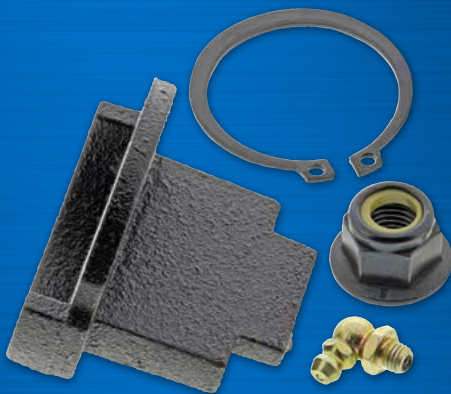

2022-2014 Jeep Cherokee (KL)

SUPREME

MS25560

Hardware included
for complete install

**Mevotech's MS25560
is the engineered and
complete solution for an
extended service life
ball joint on the 2022-2014
Jeep Cherokee (KL)**

- Exclusive and innovative installation tool included in the box allows for precise and easy installation of the ball joint
- Enhanced design uses self-lubricating greaseable sintered bearings for optimized performance
- Engineered for increased durability

- The Jeep Cherokee KL platform uses aluminum front steering knuckles with pressed-in lower ball joints
- Due to design and space restrictions, it is difficult to remove and replace the ball joints. When replacement is attempted, it often results in damage to the knuckle and/or the new replacement part.
- The OE replacement procedure involves replacing the entire knuckle with a pre-installed ball joint as an assembly. This is a costly repair.

Originally-Equipped Ball Joint

FRONT KNUCKLE

Even with the knuckle removed from the vehicle, it is difficult to correctly press in the ball joint using standard tools.

Mevotech's Engineered Solution

Press-in the upgraded Supreme ball joint simply and accurately with our innovatively engineered installation tool.

This reduces repair time and cost. This also provides an improved alternative to both the OE replacement part and method.

SUPREME™

Ball Joints also feature:

- Greaseable sintered bearings
- Application-specific ball studs with added material
- Thicker forged housings
- Hardware and installation aids included for quick fitting
